This page from the Compare report shows results for 3 scenarios for each country/region in the WDST model. In addition a graph is shown of benefits to producers and welfare benefits. This report uses the 'linkage' method which ties report cell values to solution values. As is the case with Movelist reports, if solutions are changed or if you want to compare new solutions instead of these particular ones, it is easy to redirect the report to show different values in the same format. Once a report has been generated, it can be used repeatedly.
